1. Isolate Transcoding Resources (Regional Resource Pools):

- We recommend moving away from a single, shared machine for all regional streams. If we isolate transcoding resources—or dedicate a specific server pool for each region—a heavy workload or spike in one region's stream will not drag down the performance of the others. Alternatively, the CPU capacity of the shared server needs a significant upgrade.

2. Upgrade Grafana Monitoring Queries:

- We recommend modifying our monitoring dashboards to use "maximum" aggregations (such as `max over time`) rather than simple "averages" (`avg over time`). This will ensure that brief, transient spikes are immediately visible even on long-term coarse graphs, preventing future telemetry aliasing.

#37

Use Confluent Kafka to investigate the current streaming health. List the available Kafka topics, inspect the relevant stream-health events, and summarize what the Kafka data indicates about the streaming system. Use only information actually returned by Kafka and clearly state any missing fields that prevent further correlation.

StreamGuard Kafka Observability & Streaming Health Investigation Report

1. Kafka Environment & Topic Discovery

The StreamGuard Confluent Kafka environment was thoroughly inspected using the specified credentials:

- Environment ID: env-zzg5v7
- Cluster ID: lkc-6xd5w6p

A metadata scan of the Kafka cluster retrieved the following four available topics, each configured with 6 partitions (partitions 0 to 5) and a replication factor of 3:

- stream-health
- broadcast-incidents
- continuity-alerts
- streamguard-events

2. Detailed Analysis of Kafka Stream-Health Events

All 6 partitions across all four topics were systematically scanned to locate relevant telemetry or streaming health incidents. The findings are categorized below:

- stream-health Topic:
 - Only one record was successfully retrieved from the entire topic.
 - Location: Partition 3, Offset 0
 - Timestamp: 1788069268858 (approximately Sunday, August 30, 2026, at 09:14:20.858 UTC)
 - Key: null
 - Payload / Value:
